

CIRCLES - AREA

ANSWERS

Area of a circle = $\pi \times \text{radius} \times \text{radius}$

$$A = \pi r^2$$

TO FIND THE AREA FORMULA OF A CIRCLE, SEPARATE IT AND THEN PUT IT BACK TOGETHER TO FORM A PARALLELOGRAM.

Now your turn. Use the information above and the vocabulary below to fill in the blanks.

Circumference diameter π (Pi) radius 3.14 base height

- π (pi) = 3.141592653589... or is approximately, 3.14
- Area of a parallelogram = base x height
- Circumference of a circle = 2 x π (Pi) or 3.14 x radius
- Area of a circle = $\frac{1}{2}$ x Circumference x radius
- Substitute the circumference formula into the area formula for a circle and simplify.

$$\text{Area of a circle} = \frac{1}{2} \times 2 \times \pi \text{ (Pi)} \times \text{radius} \times \text{radius}$$

$$\text{Area of a circle} = \pi \text{ (Pi)} \times (\text{radius})^2$$

Find the area of each circle. Use $\pi = 3.14$

$$A = \pi r^2$$

Area = 10.1736 sq. m

Area = 31,400 sq. ft

Area = 113.04 sq. km

Area = 0.785 sq. yd

Area = 706.5 sq. cm

Area = 1,384.74 sq. in
